# New Technologies: A Review

Prof. Prashant Jawade

Asso. Professor

Indira Mahavidyalaya, Kalamb, Dist. Yavatmal

## Abstract:

This research deals with the impacts of misusing modern technologies on members of the society and their negative influences on economic, religious and social aspect, as well as their impact on people's behavior and the responsibility of the society in monitoring the children who are in need of attention by everyone through the guidance of appropriate educational ways. Moreover, this research shows the need of joining all efforts collectively in order to protect the entire society from the dangers of modern technologies and work together to take advantage of its resources properly. This usually starts from the family and schools and ends with the universities, mass media and the various institutions that guarantee the rights of children from all different areas. However, this research emphasizes the fact that everyone should take his/her responsibilities towards using these methods properly whether at home or outside.

**Key words:** modern technologies, negative effects, impact of technology.

## I. Introduction

The more advanced technology becomes, the more it seems to have control over our lives. Today, the use of technology is widely available and insistently promoted throughout our society. While technology makes life easier for people, it also creates some problems for our society such as the decline in ordinary social behaviors. Yet, modern societies realized the significance of intellectual technology which is a form of new knowledge that achieves goals or solves many problems.

The word technology consists of two parts (Techno) means application, art or skill, and (Logy) means science and learning. Thus, the linguistic meaning of the word technology is: the methods and tools that a society has developed in order to facilitate the solution of its practical problems and to provide the necessary needs for the community. Consequently, the use of technology in all areas of life increases risks, threats and crimes associated with the use of this technique, which reflects negatively on the possibility of its use in absolute terms in all walks of life.

Since human beings are social by nature, relationships nowadays become more dominated by the use of modern technologies such as social media, which reduces the distances, despite of having negative effects on human relations in society and family. Currently, people recognize that the use of modern technologies is a requirement for life and an indication of the cultural awareness of the community. They have positive prominent roles as one of the requirements of this era where they enter in all walks of life to provide services, improve the quality of life and increase communication and relationships since it is a developed culture reflects the culture of the community.

Thus, there are increased concerns in the speed at which modern technology spreads as well as its uses and their false and negative impacts. This was due to the absence of effective guidance where some groups have become vulnerable to the negative effects of life-threatening. Since education is an important area of life, the use of modern technologies makes it an essential part in education, not just a simple addition.

This research shows the negative impacts of modern technologies on society and will contribute to raise people's awareness towards the appropriate ways of using modern technologies. The authors hope that by presenting the negative effects of modern technologies on society, it will have positive influences on individuals and society in general since modern technologies play a major role in people's lives and future possibilities.
